

Asian American Cohort Study

Be part of a historic nationwide effort to prevent cancer in Asian American communities!

Join ASPIRE

We are seeking to enroll people who are:

- Asian or Asian American (including multiracial)
- 40-75 years old
- Currently living in the US or US territories
- Not diagnosed with cancer

Participants will receive up to \$25 for completing four surveys over 12 months.

You may also receive \$10 if you are asked to donate a saliva sample (donating saliva is optional).

ASIAN AMERICAN

Cancer is the leading cause of death for most Asian American groups.

HEALTH

Asian Americans have high rates of liver, gastric, thyroid and cervical cancers.

IS

Asian American women, particularly those who have never smoked, have higher rates of lung cancer compared to other groups.

UNIQUE

Breast cancer rates are increasing among Asian American women, especially those who are foreign-born and under 50 years old.

But there is relatively little research on cancer in Asian Americans.

*Please join us to help advance
Asian American health across generations*
